Progressive Theory Assessment in class room (includes class test, mid-term test and quiz using online/offline modes)

PTA: PLA: TWA: Progressive Laboratory Assessment (includes process and product assessment using rating Scales and rubrics) Term work & Self Learning Assessment (Includes assessment related to student performance in assignments, seminars, micro projects, industrial visits, self-learning, any other student activities etc.

Separate passing is must for progressive and end semester assessment for both theory and practical.

. ETA & ELA are to be carried out at the end of the term/ semester.

Term Work is to be done by the students under the guidance of internal faculty but its assessment will be done internally (40%) as well as externally (60%). Assessment related to planning and execution of Term Work activities like assignment, micro project, seminar and self-learning is to be done by internal faculty (internal Assessment) whereas assessment of output/product/ presentation related to these activities will be carried out by external faculty (netrnal Assessment). However, criteria of internal as well as external assessment may vary as per the requirement of respective course. For valid and reliable assessment, the internal faculty should prepare checklist & rubrics for these .

activities.

D) Rationale

Python programming has emerged as a popular programming language across wide range of application segments from Scientific to Machine Learning to mobile app development, and so on. Python is a high-level general-purpose programming language.

Because code is automatically compiled to byte code and executed, Python is suitableuse as a scripting language, Web application implementation language, etc.

In Python there are multiple levels of organizational structure: functions, classes, modules, and packages. These assist in organizing code. An excellentand large example is the Python standard library.

The Object-oriented Python provides a consistent way to use objects: in Python it is easy to implement new object types (called classesin object-oriented programming). This introductory course to learn basic Python programming features which can be used as building blocks to develop different kind of applications using Python 3.

E) Course Outcomes (COs): After the completion of the course, teachers are expected to ensure the accomplishment of following course outcomes by the learners. For this, the learners are expected to perform various activities related to three learning domains (Cognitive, Psychomotor and Affective) in classroom/ laboratory/ workshop/ field/ industry.

After completion of the course, the students will be able to-

•

- **CO-1** Use various data types and operators in formation of expressions.
- **CO-2** Write and execute programs using control statements.
- **CO-3** Perform relevant operations on Sequence data types
- **CO-4** Create functions in modules
- **CO-5** Use object-oriented approach and features in writing python programs
- **CO-6** Handle data files and exceptions.

F) Suggested Course Articulation Matrix (CAM):

 the internal faculty should prepare checklist & rubrics for these activities.

I) Course Curriculum Detailing: This course curriculum detailing depicts learning outcomes at course level and session level and their attainment by the students through Classroom Instruction (CI), Laboratory Instruction (LI), Term Work (TW) and Self Learning (SL). Students are expected to demonstrate the attainment of Theory Session Outcomes (TSOs) and Lab Session Outcomes (LSOs) leading to attainment of Course Outcomes (COs) upon the completion of the course. While curriculum detailing, NEP 2020 related reforms like Green skills, Sustainability, Multidisciplinary aspects, Society connect, Indian Knowledge System (IKS) and others must be integrated appropriately.

J) Theory Session Outcomes (TSOs) and Units: T2418103

| Ma | ijor Theory Session Outcomes (TSOs) | Units | Relevant COs |
|---------|---|--|-------------------|
| TSO 1b. | Differentiate between Procedure Oriented P and Object Oriented Programming approach with example. Use the concept of Lvalue and Rvalue Write python program using various data types and operators | Unit-1.0 Basics of Python Programming syntax 1.1 Python character set, Python tokens, variables, concept of Lvalue and Rvalue, use of comments. 1.2 Data types: number (integer, floating point, complex), Boolean, sequence (string, list, tuple), none, mapping (dictionary), mutable and immutable data types 1.3 Operators: arithmetic operators, relational operators, logical operators, assignment operators. Expressions, statement, type conversion & input/output: precedence of operators, expression, evaluation of expression. | Number(s) CO-1 |
| TSO 2a. | Write Python program using decision making statements | Unit-2.0 Conditional and Iterative statements | CO-2 |
| TSO 2b. | Write Python program using loop structure to solve iterative problems | 2.1 Conditional statements: simple if statement, ifelse statemen, if-elif-else statement 2.2 Iterative statements: while loop, for loop, range function, break and continue statements, nested loops | |
| TSO 3a. | Perform various operations on string using string operators and methods | Unit-3.0 String, List, Tuples, set and Dictionary | CO-3 |
| | Perform various operations on List using list operators and methods Perform various operations on tuples using | 3.1 String: indexing, string operations (concatenation repetition, membership & slicing), traversing a string using loops, built-in functions. | |
| TSO 3d. | tuples operators and methods Perform various operations on set using set methods Perform various operations on dictionary | 3.2 Lists: introduction, indexing, list operations: concatenation, repetition, membership & slicing, traversing a list, built- in list functions, linear search on list of numbers and counting the frequency of elements in a list | |
| | using dictionary methods | 3.3 Tuples: Creating, initializing, accessing elements, tuple assignment, performing operations on tuples, tuple methods and built-in functions, nested tuples | |
| | | 3.4 Set: Creating set, traversing, adding, removing data in set, performing set operations like join, Union intersection, difference | |
| | | 3.5 Dictionary: accessing items in a dictionary using keys, mutability of dictionary: adding a new item, modifying an existing item, built-in dictionary functions. | |

| | | Sample output: d({'a': 400, 'b': 400, 'd': 400, 'c': 300}) | |
| <i>LSO 8.1.</i> Write and execute Python program to create user defined functions and call them. | 8. | Write and execute Python program to- a) Write a Python function for reversing a string and call it. b) Write a Python function for calculating compound interest and call it. c) Write a Python function for calculating the factorial of a number and call it to calculate !n/(!r)*!(n-r)) where symbol "!" stands for factorial. | CO-2, CO-4 |
| LSO 9.1. Write and execute Object Oriented Python program to define a class and its instances. LSO 9.2. Develop and execute Python program Using various types of inheritances. LSO 9.3. Develop and execute Python program Using various types of inheritances. LSO 9.4. Develop and execute Python program Using various types of Polymorphism. | 9. | Write program using OOP approach to – a) create an instance of a specified class and display the namespace of the said instance b) create a Python class named Student with two attributes: student_id, student_name. Add a new attribute: student_class. Create a function to display all attributes and their values in the Student class. c) Create a Python class named Student with two instances student1, student2 and assign values to the instances' attributes. Print all the attributes of the student1, student2 instances d) Write programs to demonstrate use of following types of inheritance: i. Single inheritance ii. Multiple inheritance iii. Multiple inheritance e) Demonstrate use of polymorphism with following situations: i. Polymorphism in operator ii. Polymorphism in built-in function iv. Polymorphism with class method v. Polymorphism with method overriding | CO-2, CO-5 |
| LSO 10.1. Develop and execute Python program to handle various type of exceptions. LSO 10.2. Develop and execute Python program to perform file operations. | 10. | a) Using exception handling feature such as tryexcept, try finally- write minimum three programs to handle following types of exceptions. i. Type Error ii. Name Error iii. Index Error iv. Key Error v. Value Error vi. IO Error vii. Zero Division Error b) Write Python program to demonstrate file operations. | CO-6, CO-1, CO-2, |

Note: in addition to above listed practical, students are suggested to practice all the examples covered by the teacher during theory sessions.

- L) Suggested Term Work and Self Learning: S2418103 Some sample suggested assignments, micro project and other activities are mentioned here for reference.
 - a. **Assignments:** Questions/Problems/Numerical/Exercises to be provided by the course teacher in line with the targeted COs.

b. Micro Projects:

- 1. Crete a shop billing system
- 2. Create income tax calculation system.
- 3. Develop number guessing game (random integer will be selected by the system and the user has to guess that integer in the minimum number of guesses. Maximum 5 guess allowed.)
- 4. Assign numbers to alphabet a-z as (1-26). User will input a word. System will convert in to a number by adding all the individual alphabet of that word.
- 5. Design a basic calculator program that performs arithmetic operations like addition, subtraction, multiplication, and division based on user input.
- 6. Any other micro-projects suggested by subject faculty on similar line.

(Students may use file and sequence data types to develop above listed applications)

c. Other Activities:

- 1. Seminar Topics:
- Tkinter widgets in python
- Python date/time module and its applications
- wxPython and its applications
- M) Suggested Course Evaluation Matrix: The course teacher has to decide and use appropriate assessment strategy and its weightage in theory, laboratory and Term Work for ensuring CO attainment. The response/performance of each student in each of these designed activities is to be used to calculate CO attainment.

Note:

The percentage given are approximate

• In case of Micro Projects and End Laboratory Assessment (ELA), the achieved marks will be equally divided in all those COs mapped with total experiments.

• For CO attainment calculation indirect assessment tools like course exit survey need to be used which comprises of questions related to achievement of each COs.

| B) | Course Title | : Applied Chemistry- A (ME, ME (Auto), CE, MIE, AE, CHE, FTS, CRE) |
| C) | Pre- requisite Course(s) | : |
| D) | Rationale | : |

Students pursuing diplomas in engineering fields like mechanical, automotive, civil, mining, chemical, ceramic, agricultural, fire technology and safety need to study applied chemistry as a prerequisite course. After completion of this course student will have a deep understanding of chemical concepts, their uses, and how they relate to engineering field. Diploma engineers deals with various concept of chemistry to be approved in diverse technical and engineering field. Ever increasing use of materials like metals, alloys and fuel and lubricants will compel engineers to acquire essential applied chemistry knowledge to select engineering material, which will be economical and eco-friendly. Through this course, they will be able to understand structural arrangement of fundamental particles, atoms and molecules. The knowledge of chemical bonding will help the engineers and scientist to design new engineering materials and form chemical compounds with desirable properties. The study of concepts like water treatment and analysis, fuels and combustions and electrochemistry have constantly proved the importance of applied chemistry.

E) Course Outcomes (COs): After the completion of the course, teachers are expected to ensure the accomplishment of following course outcomes by the learners. For this, the learners are expected to perform various activities related to three learning domains (Cognitive, Psychomotor and Affective) in classroom/ laboratory/ workshop/ field/ industry.

After completion of the course, the students will be able to-

- **CO-1** Solve various engineering problems applying the basic concepts of atomic structure, chemical bonding, and solutions.
- **CO-2** Use relevant water treatment techniques to solve domestic and industrial problems.
- **CO-3** Solve engineering problems using concepts of engineering materials and properties.
- **CO-4** Use relevant fuels and lubricants for domestic and industrial applications.
- **CO-5** Solve engineering problems using the concepts of electrochemistry and corrosion.

- PLA: Progressive Laboratory Assessment (includes process and product assessment using rating Scales and rubrics)
- TWA: Term work & Self Learning Assessment (Includes assessment related to student performance in assignments, seminars, micro projects, industrial visits, self-learning, any other student activities etc.

Note:

- Separate passing is must for progressive and end semester assessment for both theory and practical.
- ETA & ELA are to be carried out at the end of the term/ semester.
- Term Work is to be done by the students under the guidance of internal faculty but its assessment will be done internally (40%) as well as externally (60%). Assessment related to planning and execution of Term Work activities like assignment, micro project, seminar and self-learning is to be done by internal faculty (Internal Assessment) whereas assessment of output/product/ presentation related to these activities will be carried out by external faculty/expert (External Assessment). However, criteria of internal as well as external assessment may vary as per the requirement of respective course. For valid and reliable assessment, the internal faculty should prepare checklist & rubrics for these activities.

I) Course Curriculum Detailing: This course curriculum detailing depicts learning outcomes at course level and session level and their attainment by the students through Classroom Instruction (CI), Laboratory Instruction (LI), Term Work (TW) and Self Learning (SL). Students are expected to demonstrate the attainment of Theory Session Outcomes (TSOs) and Lab Session Outcomes (LSOs) leading to attainment of Course Outcomes (COs) upon the completion of the course. While curriculum detailing, NEP 2020 related reforms like Green skills, Sustainability, Multidisciplinary aspects, Society connect, Indian Knowledge System (IKS) and others must be integrated appropriately.

K) Suggested Laboratory (Practical) Session Outcomes (LSOs) and List of Practical: P2400103A

- L) Suggested Term Work and Self Learning: S2400103A Some sample suggested assignments, micro project and other activities are mentioned here for reference.
 - **a. Assignments**: Questions/Problems/Numerical/Exercises to be provided by the course teacher in line with the targeted Cos such as
 - 1. Write electronic structure of given atoms.
 - 2. Compare the wavelengths of different macroscopic and microscopic particles moving with same velocity.
 - 3. Prepare a model to find the soap lather forming capacity of tap water on addition of lime.
 - 4. Prepare chart showing different industrial application of metal and relate it with required property or properties using internet.
 - 5. Explain the working principle of TEL as antiknock.
 - 6. Prepare chart showing different types of liquid fuels with their calorific values and uses.
 - 7. Prepare a comparative chart of commercially available lubricants based on mechanism of lubrication.
 - 8. Compare the EMF of Zinc Copper cell with different cathodic concentration and predict out of low and high cathodic concentration, which increases EMF?
 - 9. Prove the statement mathematically. "It is impossible to determine the position and momentum simultaneously with accuracy."

b. Micro Projects:

- 1. Form three groups of students in the class. Consider a hypothetical situation of exchanging/ sharing/giving of different items/belongings and demonstrate the type of ionic, covalent, and co-ordinate bonding amongst the students in a simulated situation. Present your findings.
- 2. Model of electronic configurations for different atoms (Z=30)
- 3. Prepare a model to demonstrate the application of electrolytic cells.
- 4. Collect three metallic strips of Al, Cu, Fe, strips, Place them in different acidic and alkaline solutions of the same concentration. Observe and record the loss in weight of metals due to acidic and alkaline environments. Discuss the findings with your teacher and colleagues.
- 5. Classify the surrounding corrosion into dry corrosion and wet corrosion.
- 6. Collect different samples of utensils reinforced materials, iron, copper, brass, bronze, and other alloys. Place them in an open environment under tin shade. Observe the corrosive properties over a period of four weeks. Record your observations. Discuss the findings with your teacher and colleagues.
- 7. Collect the water sample from different sources of ground and surface water (at least five). Explore the new and simplest softening and water treatment methods and perform the same at your home by creating the different assemblies and manipulative techniques at home. Determine the turbidity and pH of water (using pH paper).
- 8. Collection of data of various cement, glass, paints, and varnishes available in the market.
- 9. Compare the EMF of a given cell using different fruit juice as electrolyte.
- 10. Compare the hardness of different sample water by measuring the time required for forming lather.
- 11. Determine the flash point and fire point of a lubricant.
- 12. Collect petrol from different petrol pumps and compare the extent of knocking by comparing their mileage.

c. Other Activities:

- 1. Seminar Topics:
 - Water Softening techniques.
 - Advantages and drawbacks of different atomic structures proposed by different scientists.
 - Properties of good lubricants.
 - Application of Nernst equation.
- 2. Visits: Visit nearby Water treatment plant. Prepare report of visit. Visit a nearby battery shop. Prepare a report of visit.
- 3. Self-learning topics:

M) Suggested Course Evaluation Matrix: The course teacher has to decide and use appropriate assessment strategy and its weightage in theory, laboratory and Term Work for ensuring CO attainment. The response/performance of each student in each of these designed activities is to be used to calculate CO attainment.

D) Rationale

In day-to-day working we come across different types of structures created for different purposes and functions, while designing the structures, analysis of forces and stresses' is an important and prerequisite step. Correct analysis is possible only when one knows the types and effects of forces acting on the structures. This course provides the scope to understand fundamental concepts of laws of mechanics and their applications to different engineering problems. This course is designed to provide basic understanding about the different types of forces, moments and their effects on structural elements and to analyze different structural systems.

The aim of this course is to help the student to comprehend the importance of applied mechanics and apply the principles of engineering mechanics to solve engineering problems.

E) Course Outcomes (COs): After the completion of the course, teachers are expected to ensure the accomplishment of following course outcomes by the learners. For this, the learners are expected to perform various activities related to three learning domains (Cognitive, Psychomotor and Affective) in classroom/ laboratory/ workshop/ field/ industry.

After completion of the course, the students will be able to-

•

- **CO-1** Compute the force to solve the problems
- **CO-2** Analyse various analytical and graphical conditions required for equilibrium of engineering systems.
- **CO-3** Apply the principles of friction in various conditions to solve problems.
- **CO-4** Calculate centroid, center of gravity and moment of Inertia of different geometrical shapes.
- **CO-5** Select the relevant lifting machine(s) for the given purposes.

- CI: Classroom Instruction (Includes different instructional/implementation strategies i.e. Lecture (L), Tutorial (T), Case method, Demonstrations, Video demonstration, Problem based learning etc. to deliver theoretical concepts)
- LI: Laboratory Instruction (Includes experiments/practical performances /problem-based experiences in laboratory, workshop, field or other locations using different instructional/Implementation strategies)

Notional Hours: Hours of engagement by learners, other than the contact hours for ensuring learning.

- TW: Term Work (includes assignments, seminars, micro projects, industrial visits, any other student activities etc.)
- SL: Self Learning, MOOCs, spoken tutorials, online educational resources etc.
- C: Credits = (1 x Cl hours) + (0.5 x Ll hours) + (0.5 x Notional hours)

Legend:

PTA: Progressive Theory Assessment in class room (includes class test, mid-term test and quiz using online/offline modes)

PLA: Progressive Laboratory Assessment (includes process and product assessment using rating Scales and rubrics)

TWA: Term work & Self Learning Assessment (Includes assessment related to student performance in assignments, seminars, micro projects, industrial visits, self-learning, any other student activities etc.

Note:

- Separate passing is must for progressive and end semester assessment for both theory and practical.
- ETA & ELA are to be carried out at the end of the term/ semester.
- Term Work is to be done by the students under the guidance of internal faculty but its assessment will be done internally (40%) as well as externally (60%). Assessment related to planning and execution of Term Work activities like assignment, micro project, seminar and self-learning is to be done by internal faculty (Internal Assessment) whereas assessment of output/product/ presentation related to these activities will be carried out by external faculty/expert (External Assessment). However, criteria of internal as well as external assessment may vary as per the requirement of respective course. For valid and reliable assessment, the internal faculty should prepare checklist & rubrics for these activities.

I) Course Curriculum Detailing: This course curriculum detailing depicts learning outcomes at course level and session level and their attainment by the students through Classroom Instruction (CI), Laboratory Instruction (LI), Term Work (TW) and Self Learning (SL). Students are expected to demonstrate the attainment of Theory Session Outcomes (TSOs) and Lab Session Outcomes (LSOs) leading to attainment of Course Outcomes (COs) upon the completion of the course. While curriculum detailing, NEP 2020 related reforms like Green skills, Sustainability, Multidisciplinary aspects, Society connect, Indian Knowledge System (IKS) and others must be integrated appropriately.

- L) Suggested Term Work and Self Learning: S2425104 Some sample suggested assignments, micro project and other activities are mentioned here for reference.
 - **a. Assignments**: Questions/Problems/Numerical/Exercises to be provided by the course teacher in line with the targeted COs.
 - b. Micro Projects:
 - Visit nearby tool room/industry and collect information regarding lifting machine used with their technical specification and their application and prepare comparison chart.
 - prepare model of simple lifting machine.
 - Prepare models of beam subject to point load, uniformly distributed loads, simply supported, overhang beam.
 - Prepare chart showing real-life examples including various types of forces.

c. Other Activities:

- 1. Seminar Topics:
 - Collision of elastic bodies
 - Law of conservation of energy
 - concept of parallel axis and perpendicular axes theorem
- 2. Visits: Visit nearby tool room/industry with workshop facilities. Prepare report of visit with special comments of simple lifting machine to be used.
- 3. Self-learning topics:
 - Types of load and beam.
 - Various force system.
 - Simple lifting machine.
 - Centroid of various plane figure
- M) Suggested Course Evaluation Matrix: The course teacher has to decide and use appropriate assessment strategy and its weightage in theory, laboratory and Term Work for ensuring CO attainment. The response/performance of each student in each of these designed activities is to be used to calculate CO attainment.

This course is an extension of the course based on Mathematics of first semester namely Basic Engineering Mathematics. The course is designed to inculcate its application in relevant branch of engineering and technology. With calculus we can find how the changing conditions of a system affect us, we can control a system. Definite integral is a powerful tool helps us realize and model the world around us. Differential equations are widely applied to modern natural phenomenon, engineering systems and many other situations. Numerical methods offer approximate but credible accurate solutions to the problems that are not readily or possibly solved by closed-form solution methods. On the other hand, Numerical integration is a computational (approximate) approach of evaluating definite integrals. It has a lot of applications in engineering such as in the computation of areas, volumes, and surfaces. It also has the advantage of being easily programmable in computer software. Probability distributions are useful for modeling, simulation, analysis, and inference on varieties of natural processes and physical phenomena. A situation in which an experiment is repeated a fixed number of times can be modeled, engineers need to apply existing knowledge of success and failure to a specific analytical scenario.

E) Course Outcomes (COs): After the completion of the course, teachers are expected to ensure the accomplishment of following course outcomes by the learners. For this, the learners are expected to perform various activities related to three learning domains (Cognitive, Psychomotor and Affective) in classroom/ laboratory/ workshop/ field/ industry.

After completion of the course, the students will be able to-

- **CO-1** Demonstrate the ability to solve engineering related problems based on applications of integration.
- **CO-2** Develop the ability to use differential equations as a tool to solve problems related to engineering.
- **CO-3** Select suitable method to solve nonlinear equations based on engineering applications.
- **CO-4** Measure the area and volume of engineering related problems using the concept of numerical integration.
- **CO-5** Develop the ability to use probability distribution to solve broad based engineering related problems.

Legend:

PTA: Progressive Theory Assessment in class room (includes class test, mid-term test and quiz using online/offline modes)

PLA: Progressive Laboratory Assessment (includes process and product assessment using rating Scales and rubrics)

TWA: Term work & Self Learning Assessment (Includes assessment related to student performance in assignments, seminars, micro projects, industrial visits, self-learning, any other student activities etc.

Note:

- Separate passing is must for progressive and end semester assessment for both theory and practical.
- ETA & ELA are to be carried out at the end of the term/ semester.
- Term Work is to be done by the students under the guidance of internal faculty but its assessment will be done **internally (40%)** as well as **externally (60%)**. Assessment related to planning and execution of Term Work activities like assignment, micro project, and seminar and self-learning is to be done by internal faculty (Internal Assessment) whereas assessment of output/product/ presentation related to these activities will be carried out by external faculty/expert (External Assessment). However, criteria of internal as well as external assessment may vary as per the requirement of respective course. For valid and reliable assessment, the internal faculty should prepare checklist & rubrics for these activities.

I) Course Curriculum Detailing: This course curriculum detailing depicts learning outcomes at course level and session level and their attainment by the students through Classroom Instruction (CI), Laboratory Instruction (LI), Term Work (TW) and Self Learning (SL). Students are expected to demonstrate the attainment of Theory Session Outcomes (TSOs) and Lab Session Outcomes (LSOs) leading to attainment of Course Outcomes (COs) upon the completion of the course. While curriculum detailing, NEP 2020 related reforms like Green skills, Sustainability, Multidisciplinary aspects, Society connect, Indian Knowledge System (IKS) and others must be integrated appropriately.

L) Suggested Term Work and Self Learning: S2400105A

- **a. Assignments**: Questions/Problems/Numerical/Exercises to be provided by the course teacher in line with the targeted COs.
 - 1. Calculate the flow rate of a fluid through a pipe with a given velocity profile using integration through open source software.
 - 2. Given the plan view of a concrete structure and the desired thickness of the concrete, calculate the area between the curves to determine the surface area of the formwork required.
 - 3. A beam is subjected to a distributed load. The beam has a length L and a flexural rigidity EI, where E is the Young's modulus and I is the moment of Inertia of the beam cross -section. Write down the differential equations that describes the deflection of the beam and solve it to find the deflection equation.
 - 4. Use open source software to plot the family of curves and compute its differential equations.
 - 5. Write down a program to compute the root of nonlinear equation by Newton-Raphson method.
 - 6. Write down a program to find the root of transcendental equation by iterative method correct upto 4 decimal places.
 - 7. Implement Simpson's rule to approximate the definite integral of the function. Choose an appropriate number of sub intervals and calculate the approximate value of the Integral using open source software.
 - 8. Use Trapezoidal rule to estimate the Integration for given function using open source software.
 - 9. Use Binomial Distribution in decision-making related to Quality control and process improvement in manufacturing process.
 - 10.Use Poisson distribution to calculate the number of websites visitors per hour.

b. Micro Projects:

- 1. Prepare charts displaying various standard integration formulas.
- 2. Explore the use of Integral calculus to calculate the velocity and acceleration of a particle.
- 3. Prepare charts showing area and volume of various geometrical shapes using Integral calculus.
- 4. Prepare a model showing the applications of differential equations for rate of decay of radioactive materials.
- 5. Prepare model showing the applications of differential equation for Newton's law of cooling.
- 6. Prepare a simulating environment to study the motion of a particle under the influence of gravity.
- 7. Prepare a comparative chart showing convergence of various iterative techniques.
- 8. Prepare a chart consisting of 8-10 nonlinear equations made of real-world problems.

- 9. Download 5-7 videos based on applications of numerical integration in mechanical, civil, auto engineering branches, watch them and write a report to detail out the mathematical steps involved.
- 10.Make a short video of duration 5-7 minutes for the applications of numerical integration in Chemical, Agriculture, Ceramic engineering branches.
- 11.Download 5-7 videos based on engineering applications of Binomial and Poisson's distribution, watch them and write a report to detail out the mathematical steps involved.
- 12.Make a short video of duration 10-15 minutes on at least 7-8 engineering applications of Normal distribution.

c. Other Activities:

- 1. Seminar Topics:
 - Applications of Integral calculus in control systems, dynamics and vibrations.
 - Applications of Integral calculus in production and cost analysis.
 - Applications of Integral calculus in algorithms and optimization.
 - Applications of Integral calculus in population dynamics and bio-mathematics.
 - Applications of Integral calculus in filtering and feature extraction.
 - Solving Differential Equations through SCILAB.
 - Applications of Differential Equations in population dynamics and epidemiology.
 - Differential Equations with discontinues input via Laplace Transform: Techniques and Applications.
 - Applications of Numerical Methods for engineers.
 - Numerical Solution of Nonlinear Equations using Root-Finding Algorithms: Techniques and Applications.
 - Numerical integration and its engineering applications.
 - Engineering applications of Binomial and Poisson's distribution.
 - Real life examples of Normal Distribution.
 - Probability distribution and its engineering applications.
- 2. Visits: Visiting following places would provide students an opportunity to see the application of various branches of mathematics in different fields. This will also help students to comprehend the career opportunities available in the field of mathematics.
 - Visit to a Science museum.
 - Visit to a mathematics research institute.
 - Visit to a Data Science Center.
 - Visit to a mathematics department of a college or university.
 - Visit to a software company.
 - Visit to a Space Agency.
 - Visit to a Gamming Studio.
 - Participation in mathematics competition.
- 3. Self-learning topics:
 - Participate in MOOCs on Integration Techniques and Applications.
 - Participate in MOOCs on Ordinary Differential Equations: Methods and Applications.
 - Participate in Open course ware of MIT on the Newton-Raphson Method: rate of convergence.
 - Watching videos on numerical integration: Concepts and Applications.
 - Watching video on Probability distribution and its engineering applications.

M) Suggested Course Evaluation Matrix: The course teacher has to decide and use appropriate assessment strategy and its weightage in theory, laboratory and Term Work for ensuring CO attainment. The response/performance of each student in each of these designed activities is to be used to calculate CO attainment.

C) Pre- requisite Cou D) Rationale

Every creature depends on nature for their survival. It is therefore, not only essential but also moral responsibility of all of us to keep our environment clean & in a good condition. The global environmental issues such as clean water and sanitation, affordable & clean energy, sustainable cities & communities, etc. are best addresses through sustainable development goals. Environmental education is one of the primary activities to spread the concept of sustainability on a broader scope. In India, environmental education is considered as mandatory for all segment of education including technical education. Every creature depends on nature for their survival. It is therefore, not only essential but also moral responsibility of all of us to keep our environment clean & in a good condition. The concept of sustainable development is closely associated with environmental education to promote developments. Considering importance of environmental education and sustainable development, it became necessary to provide basics of these areas to the engineering graduates. The knowledge gained through this course will help the diploma students to take engineering decisions aligned to ensure sustainability of environment for next generations through proper protection of environment.

E) Course Outcomes (COs): After the completion of the course, teachers are expected to ensure the accomplishment of following course outcomes by the learners. For this, the learners are expected to perform various activities related to three learning domains (Cognitive, Psychomotor and Affective) in classroom/ laboratory/ workshop/ field/ industry.

After completion of the course, the students will be able to-

- **CO-1** Explain the importance of ecosystem for the protection of environment
- CO-2 Use relevant air & water pollution control methods to solve pollution related issues
- **CO-3** Recognize relevant energy sources required for domestic & industrial application
- CO-4 Analyze the issues of climate change and its impact on sustainability
- **CO-5** Apply engineering solutions/methods/legislations to reduce the activities that are harming the environment.

Note: Prefix will be added to Course Code if applicable (T for theory Paper, P for Practical Paper and S for Term work) Legend:

CI: Classroom Instruction (Includes different instructional/implementation strategies i.e. Lecture (L), Tutorial (T), Case method, Demonstrations, Video demonstration, Problem based learning etc. to deliver theoretical concepts)

LI: Laboratory Instruction (Includes experiments/practical performances /problem-based experiences in laboratory, workshop, field or other locations using different instructional/Implementation strategies)

Notional Hours: Hours of engagement by learners, other than the contact hours for ensuring learning.

TW: Term Work (includes assignments, seminars, micro projects, industrial visits, any other student activities etc.)

SL: Self Learning, MOOCs, spoken tutorials, online educational resources etc.

C: Credits = (1 x CI hours) + (0.5 x LI hours) + (0.5 x Notional hours)

Note: TW and SL have to be planned by the teacher and performed by the learner under the continuous guidance and feedback of teacher to ensure outcome of learning.

TWA: Term work & Self Learning Assessment (Includes assessment related to student performance in assignments, seminars, micro projects, industrial visits, self-learning, any other student activities etc.

Note:

- Separate passing is must for progressive and end semester assessment for both theory and practical.
- ETA & ELA are to be carried out at the end of the term/ semester.
- Term Work is to be done by the students under the guidance of internal faculty but its assessment will be done internally (40%) as well as externally (60%). Assessment related to planning and execution of Term Work activities like assignment, micro project, seminar and self-learning is to be done by internal faculty (Internal Assessment) whereas assessment of output/product/ presentation related to these activities will be carried out by external faculty/expert (External Assessment). However, criteria of internal as well as external assessment may vary as per the requirement of respective course. For valid and reliable assessment, the internal faculty should prepare checklist & rubrics for these activities.

I) Course Curriculum Detailing: This course curriculum detailing depicts learning outcomes at course level and session level and their attainment by the students through Classroom Instruction (CI), Laboratory Instruction (LI), Term Work (TW) and Self Learning (SL). Students are expected to demonstrate the attainment of Theory Session Outcomes (TSOs) and Lab Session Outcomes (LSOs) leading to attainment of Course Outcomes (COs) upon the completion of the course. While curriculum detailing, NEP 2020 related reforms like Green skills, Sustainability, Multidisciplinary aspects, Society connect, Indian Knowledge System (IKS) and others must be integrated appropriately.

- L) Suggested Term Work and Self Learning: P2400006 Some sample suggested assignments, micro project and other activities are mentioned here for reference.
 - **a. Assignments**: Questions/Problems- Real life problem /Numerical/Exercises to be provided by the course teacher in line with the targeted COs.
 - 1. Conduct a waste audit in your polytechnic. Categorize waste into different types such as plastic, paper, organic. Quantify the amount of each waste.

b. Micro Projects:

- Conduct of EIA of a project/activity such as construction of roads in the local area. Prepare a report on:
 - (a) Environmental issues in your city
 - (b) SDGs and environment related acts/laws applicable in your state and in India.
 - (c) Current-status & future-prospects of Wind Energy
 - (d) New energy sources
- Prepare a model of rain water harvesting system to demonstrate how rainwater can be collected and stored for various purposes such as irrigation and toilet flushing.
- Students may be asked in group to set up a small solar panel to compare the energy output under different lighting condition and angles to understand the concept of solar energy and its potential applications.

c. Other Activities:

- 1. Seminar Topics:
 - Climate change issue and problems
 - Sustainable development- Global practices
 - Factor affecting sustainability in India
- 2. Visits:

Visit Pollution control Board of your city. Prepare report of visit with special comments of initiatives taken for protecting environment and ensuring sustainable development of the city.

Organize a field trip to a nearby park for the students. Students can be observed different species of the plants, animals and insects. They may be asked to prepare report on importance of biodiversity conservation.

- 3. Self-learning topics:
 - Sustainable Development Goals
 - Climate change.
 - Pollution issues
 - Laws and legislation of environmental protection
- M) Suggested Course Evaluation Matrix: The course teacher has to decide and use appropriate assessment strategy and its weightage in theory, laboratory and Term Work for ensuring CO attainment. The response/performance of each student in each of these designed activities is to be used to calculate CO attainment.

B) **Course Title** : Indian Constitution (Common for all Programmes) C) Pre- requisite Course(s)

D) Rationale

This course will focus on the basic structure and operative dimensions of Indian Constitution. It will explore various aspects of the Indian political and legal system from a historical perspective highlighting the various events that led to the making of the Indian Constitution. The Constitution of India is the supreme law of India. The document lays down the framework demarcating the fundamental political code, structure, procedures, powers, and sets out fundamental rights, directive principles, and the duties of citizens. The course on constitution of India highlights key features of Indian Constitution that makes the students a responsible citizen. In this online course, we shall make an effort to understand the history of our constitution, the Constituent Assembly, the drafting of the constitution, the preamble of the constitution that defines the destination that we want to reach through our constitution, the fundamental right constitution guarantees through the great rights revolution, the relationship between fundamental rights and fundamental duties, the futurist goals of the constitution as incorporated in directive principles and the relationship between fundamental rights and directive principles.

Semester - II

E) Course Outcomes (COs): After the completion of the course, teachers are expected to ensure the accomplishment of following course out comes by the learners. For this, the learners are expected to perform various activities related to three learning domains (Cognitive, Psychomotor and Affective) in classroom/laboratory/workshop/field/ industry.

After completion of the course, the students will be able to-

- CO-1 List salient features and characteristics of the constitution of India.
- CO-2 Follow fundamental rights and duties as responsible citizen and engineer of the country.
- Analyze major constitutional amendments in the constitution. CO-3

TWA: Term work & Self Learning Assessment (Includes assessment related to student performance in assignments, seminars, micro projects, industrial visits, self-learning, any other student activities etc.

Note:

- Separate passing is must for progressive and end semester assessment for both theory and practical.
- ETA & ELA are to be carried out at the end of the term/ semester.
- Term Work is to be done by the students under the guidance of internal faculty but its assessment will be done **internally (40%)** as well as **externally (60%)**. Assessment related to planning and execution of Term Work activities like assignment, micro project, seminar and self-learning is to be done by internal faculty (Internal Assessment) whereas assessment of output/product/ presentation related to these activities will be carried out by external faculty/expert (External Assessment). However, criteria of internal as well as external assessment may vary as per the requirement of respective course. For valid and reliable assessment, the internal faculty should prepare checklist & rubrics for these activities.
- I) Course Curriculum Detailing: This course curriculum detailing depicts learning outcomes at course level and session level and their attainment by the students through Classroom Instruction (CI), Laboratory Instruction (LI), Term Work (TW) and Self Learning (SL). Students are expected to demonstrate the attainment of Theory Session Outcomes (TSOs) and Lab Session Outcomes (LSOs) leading to attainment of Course Outcomes (COs) upon the completion of the course. While curriculum detailing, NEP 2020 related reforms like Green skills, Sustainability, Multidisciplinary aspects, Society connect, Indian Knowledge System (IKS) and others must be integrated appropriately.

J) Theory Session Outcomes (TSOs) and Units: T2400007

| Major Theory Session Outcomes (TSOs) | Units | Relevant COs Number(s) |
|---|---|------------------------------|
| TSO 1a. Explain the meaning of preamble of the constitution. TSO 1b. List the salient features of constitution. TSO 1c. List the characteristics of constitution. | Unit-1.0 Constitution and Preamble 1.1 Meaning of the constitution of India. 1.2 Historical perspective of the Constitution of India. 1.3 Salient features and characteristics of the Constitution of India. 1.4 Preamble to the Constitution of India. | CO1 |
| TSO 2a. Enlist the fundamental rights. TSO 2b. Identify fundamental duties in general and in particular with engineering field. TSO 2c. identify situations where directive principles prevail over fundamental rights. | Unit-2.0 Fundamental Rights and Directive Principles 2.1 Fundamental Rights under Part-III. 2.2 Fundamental duties and their significance. 2.3 Relevance of Directive Principles of State Policy under part-IV. | CO2 |
| <i>TSO 3a</i> . Enlist the constitutional amendments. <i>TSO 3b</i> . Analyze the purposes of various amendments. | Unit-3.0 Governance and Amendments 3.1 Amendment of the Constitutional Powers and Procedure 3.2 Major Constitutional Amendment procedure - 42nd, 44th, 74th, 76th, 86th and 91st | CO3 |

Note: One major TSO may require more than one Theory session/Period.

K) Suggested Laboratory (Practical) Session Outcomes (LSOs) and List of Practical: (Not Applicable)

- L) Suggested Term Work and Self Learning: S2400207 Some sample suggested assignments, micro project and other activities are mentioned here for reference.
 - **a. Assignments**: Questions/Problems/Numerical/Exercises to be provided by the course teacher in line with the targeted COs.

b. Micro Projects:

- 1. Role of Media in Spreading Awareness regarding Fundamental Rights
- 2. Analysis of Situations where directive principle of State policy has prevailed over Fundamental rights
- 3. Analyze 42nd and 97th Amendment of Indian Constitution

c. Other Activities:

- 1. Seminar Topics:
- Democracy and Political Participation in India
- Situations where directive principles prevail over fundamental rights.
- 2. Visits:
- Arrange Mock Parliament.
- 3. Design games and simulation on emergencies declared in last thirty years.
- 4. Group discussions on current print articles.
 - Adoption of Article 365 in India.
 - Need of amendments in the constitution.
- 5. Prepare collage/posters on current constitutional issues.
 - Emergencies declared in India
 - Seven fundamental rights
- 6. Cases: Suggestive cases for usage in teaching:

| Case | Relevance |
|--------------------------------|--|
| A.K. Gopalan Case (1950) | SC contented that there was no violation of Fundamental Rights enshrined in Articles 13, 19, 21 and 22 under the provisions of the Preventive Detention Act, if the detention was as per the procedure established by law. Here, the SC took a narrow view of Article 21. |
| Shankari Prasad Case (1951) | This case dealt with the amendability of Fundamental Rights (the First Amendment's validity was challenged). The SC contended that the Parliament's power to amend under Article 368 also includes the power to amend the Fundamental Rights guaranteed in Part III of the Constitution. |
| Minerva Mills case (1980) | This case again strengthens the Basic Structure doctrine. The judgement struck down 2 changes made to the Constitution by the 42nd Amendment Act 1976, declaring them to violate the basic structure. The judgement makes it clear that the Constitution, and not the Parliament is supreme. |
| Maneka Gandhi | A main issue in this case was whether the right to go abroad is a part of the |
| case (1978) | Right to Personal Liberty under Article 21. The SC held that it is included in the Right to Personal Liberty. The SC also ruled that the mere existence of an enabling law was not enough to restrain personal liberty. Such a law must also be "just, fair and reasonable." |

7. Self-learning topics:

- Parts of the constitution and a brief discussion of each part.
- Right to education.
- Right to equality.
- M) Suggested Course Evaluation Matrix: The course teacher has to decide and use appropriate assessment strategy and its weightage in theory, laboratory and Term Work for ensuring CO attainment. The response/performance of each student in each of these designed activities is to be used to calculate CO attainment.

Note:

- The percentage given are approximate
- In case of Micro Projects and End Laboratory Assessment (ELA), the achieved marks will be equally divided in all those COs mapped with total experiments.
- For CO attainment calculation indirect assessment tools like course exit survey need to be used which comprises of questions related to achievement of each COs.

Besides working in technical environment in their profession, diploma pass outs may also get involved in routine office task related to creating business documents, perform data analysis and its graphical representations, making presentations. In order to carry-out these works, the students need to learn various desk-top based and internet-based software tools such as- office automation applications like word processing, spreadsheets and presentation tools. They also need to use these tools for making their project reports and presentations during their graduation Programme. The objective of this course is to develop the basic competency in students for using these office automation tools to accomplish the job.

E) Course Outcomes (Cos): After the completion of the course, teachers are expected to ensure the accomplishment of following course outcomes by the learners. For this, the learners are expected to perform various activities related to three learning domains (Cognitive, Psychomotor and Affective) in classroom/ laboratory/ workshop/ field/ industry.

After completion of the course, the students will be able to-

- **CO-1** Prepare business document using word processing tool.
- **CO-2** Manipulate data and represent it graphically using spreadsheet.
- **CO-3** Prepare professional slide-based presentations.
- **CO-4** Work effectively with Internet and basic web services

- C) Pre- requisite Course(s)
- D) Rationale

This course will survey the basic structure and operative dimensions of Indian knowledge system. With the new education policy-NEP 2020 focusing on Indian Knowledge Systems (IKS) and Traditions of India. This course introduces the learners to the rich and varied knowledge traditions of India from antiquity to the present. This also helps the learner to know and understand their own systems and traditions which are imperative for any real development and progress. Also, it helps the learner to think independently and originally adopting Indian frameworks and models for solving the problems related to world of work where the student is supposed to perform.

E) Course Outcomes (COs): After the completion of the course, teachers are expected to ensure the accomplishment of following course out comes by the learners. For this, the learners are expected to perform various activities related to three learning domains (Cognitive, Psychomotor and Affective) in classroom/laboratory/workshop/field/ industry.

After completion of the course, the students will be able to-

- **CO-1** Identify the rich heritage and legacy residing in our Indian Knowledge systems.
- **CO-2** Correlate the technological & philosophical concepts of IKS with engineering domain specific problems and local problems for finding out possible solutions.

- PLA: Progressive Laboratory Assessment (includes process and product assessment using rating Scales and rubrics)
- TWA: Term work & Self Learning Assessment (Includes assessment related to student performance in assignments, seminars, micro projects, industrial visits, self-learning, any other student activities etc.

Note:

- Separate passing is must for progressive and end semester assessment for both theory and practical.
- ETA & ELA are to be carried out at the end of the term/ semester.
- Term Work is to be done by the students under the guidance of internal faculty but its assessment will be done internally (40%) as well as externally (60%). Assessment related to planning and execution of Term Work activities like assignment, micro project, seminar and self-learning is to be done by internal faculty (Internal Assessment) whereas assessment of output/product/ presentation related to these activities will be carried out by external faculty/expert (External Assessment). However, criteria of internal as well as external assessment may vary as per the requirement of respective course. For valid and reliable assessment, the internal faculty should prepare checklist & rubrics for these activities.

I) Course Curriculum Detailing: This course curriculum detailing depicts learning outcomes at course level and session level and their attainment by the students through Classroom Instruction (CI), Laboratory Instruction (LI), Term Work (TW) and Self Learning (SL). Students are expected to demonstrate the attainment of Theory Session Outcomes (TSOs) and Lab Session Outcomes (LSOs) leading to attainment of Course Outcomes (COs) upon the completion of the course. While curriculum detailing, NEP 2020 related reforms like Green skills, Sustainability, Multidisciplinary aspects, Society connect, Indian Knowledge System (IKS) and others must be integrated appropriately.

 - **a. Assignments**: Questions/Problems/Numerical/Exercises to be provided by the course teacher in line with the targeted COs.

b. Micro Projects:

1. Write a report on any IKS domain highlighting the correlation with one domain specific engineering course.

c. Other Activities:

- 1. Seminar Topics: discuss any one IKS domain in details a highlighting the eminent works in the area.
- 2. Visits:
 - Visit any nearby ancient temple and corelate the geomatical, Shilpa and Vaastu on IKS dimensions specified in each domain.
- 3. Self-learning topics:
 - Sustainable practices adopted in ancient India that can be applied for current engineering situations.
- M) Suggested Course Evaluation Matrix: The course teacher has to decide and use appropriate assessment strategy and its weightage in theory, laboratory and Term Work for ensuring CO attainment. The response/performance of each student in each of these designed activities is to be used to calculate CO attainment.

The course is designed to provide students with an overview of the management functions and its role in organizations and society. The course aims to provide students with the basic managerial knowledge necessary for engineering students in the world of work. The course focuses on providing students with analytical, developmental, managerial, and technical skills that relate to managerial positions in organizations. This course is an introduction to the critical management skills involved in planning, organizing, controlling, leading and decision making in an organization. It provides a framework for understanding issues involved in both managing and being managed, and it will help you to be a more effective contributor to organizations that you join.

E) Course Outcomes (COs): After the completion of the course, teachers are expected to ensure the accomplishment of following course out comes by the learners. For this, the learners are expected to perform various activities related to three learning domains (Cognitive, Psychomotor and Affective) in classroom/laboratory/workshop/field/ industry.

After completion of the course, the students will be able to-

- Design strategic plan for various types of organizations. CO-1
- CO-2 Take decisions to handle world of work situations.
- CO-3 Formulate organizational hierarchy for different situations.
- CO-4 Identify various leadership styles.
